Test 7: Numbers and calculations

# Complex Tables Test

## Test 1: Multi-column table with varying content lengths

| Column 1 | Column 2                               | Column 3                                                                                                  | Column 4                                                                    | Column 5 |
|----------|----------------------------------------|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|----------|
| Short    | Medium length text                     | This is a very long text that should wrap within the cell and test how the table handles overflow content | Value                                                                       | Data     |
| A        | B                                      | C                                                                                                         | D                                                                           | E        |
| 12345    | Lorem ipsum dolor sit amet             | X                                                                                                         | Y                                                                           | Z        |
| Test     | Another row with mixed content lengths | Short                                                                                                     | Very long description that goes on and on and should test wrapping behavior | End      |

## Test 2: Table with alignment variations

| Left Aligned | Center Aligned | Right Aligned | Default |
|--------------|----------------|---------------|---------|
| Left         | Center         | Right         | Default |
| Apple        | 100            | \$5.99        | Green   |
| Banana       | 200            | \$3.49        | Yellow  |
| Cherry       | 50             | \$12.99       | Red     |

### Test 3: Table with special characters and formatting

| Feature                  | Description                         | Status        | Notes         |
|--------------------------|-------------------------------------|---------------|---------------|
| Bold Text                | <code>code inline</code>            | ✅ Done        | Works well    |
| <i>Italic</i>            | <a href="#">Link</a>                | 🔄 In Progress | Testing...    |
| <del>Strikethrough</del> | Mixed <b>bold</b> and <i>italic</i> | ❌ Failed      | Needs fix     |
| Unicode: 你好              | Emoji: 🚀🎉💯                          | ⚠️ Warning    | Special chars |

### Test 4: Wide table with many columns

| Col1 | Col2 | Col3 | Col4 | Col5 | Col6 | Col7 | Col8 | Col9 | Col10 |
|------|------|------|------|------|------|------|------|------|-------|
| A1   | B1   | C1   | D1   | E1   | F1   | G1   | H1   | I1   | J1    |
| A2   | B2   | C2   | D2   | E2   | F2   | G2   | H2   | I2   | J2    |
| A3   | B3   | C3   | D3   | E3   | F3   | G3   | H3   | I3   | J3    |

### Test 5: Narrow table with very wide content

| Item   | Description                                                                                                                                                                                                                                                                 |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Test 1 | This is an extremely long description that contains a lot of text and should definitely cause wrapping issues if the table doesn't handle overflow properly. It includes multiple sentences and goes on for quite a while to really stress test the rendering capabilities. |
| Test 2 | Another long entry with a URL: https://www.example.com/very/long/path/to/some/resource/that/might/cause/problems/with/table/formatting                                                                                                                                      |
| Test 3 | Code example: <code>const veryLongVariableName = someFunctionWithALongName(parameterOne, parameterTwo, parameterThree, parameterFour);</code>                                                                                                                               |

## Test 6: Empty cells and minimal content

| A | B | C |
|---|---|---|
| X |   | Z |
|   | Y |   |
| 1 | 2 | 3 |
|   |   |   |

## Test 7: Numbers and calculations

| Item     | Quantity | Unit Price | Subtotal | Tax (10%) | Total    |
|----------|----------|------------|----------|-----------|----------|
| Widget A | 5        | \$19.99    | \$99.95  | \$9.99    | \$109.94 |
| Widget B | 10       | \$7.50     | \$75.00  | \$7.50    | \$82.50  |
| Widget C | 2        | \$149.99   | \$299.98 | \$29.99   | \$329.97 |
| TOTAL    | 17       | -          | \$474.93 | \$47.48   | \$522.41 |
